TRUE GARDEN IS THE MOST ADVANCED GREENHOUSE IN THE SOUTHWEST

Phoenix, Arizona-based True Garden is the premier vertical aeroponic food farm in the Southwest U.S. This first-of-its-kind facility, operated by solar power, was designed in partnership with Future Growing LLC with a vision to drastically reduce the region's agricultural water consumption while making local, living produce available year-round in the hot desert regions of Phoenix and the Southwest US.

True Garden is the first high-tech greenhouse in the U.S. capable of producing most cool season food crops year-round even in the scorching desert, where temperatures reach 120 degrees during the day and 90 degrees at night during peak months. The greenhouse uses very little energy in the winter months by operating in a naturally vented mode. During the hotter summer months, the greenhouse utilizes a combination of smart and efficient technologies to affordably keep the greenhouse at optimal temperatures, both during the day and night.

AEROPONIC WORKSHOPS

Whether you are new to Tower Gardens or a seasoned pro, we are here to support you. Join us to learn and explore the power and exciting ways a Tower Garden can change the way you cook and eat at home! Every month we offer a beginners class and an advanced class. Classes are taught by experts

in the Aeroponics field. If you're interested in learning more about the power of Tower Garden and how it can transform your lifestyle, you can join our Aeroponic Workshops. Beginner and advanced classes are open, covering the essentials of growing produce and mastering tower gardening techniques. We cover trimming, harvesting, tower placement, tomato trimming/cloning techniques, best practices in botanical pest controls, pollination, and more.

COCO COIR

We would like to introduce you to our **Next Generation Grow Medium**. We have transitioned to **Coco Coir**, which is 100% Certified Organic & OMRI Listed®.

Coco coir is made from the coconut husk. What was once considered a waste and a byproduct of the coconut industry is now a major staple of growers all around the world. Coco coir is sought after by most growers for its excellent water holding capacity as well as an amazing ability to transfer nutrients to the plant. In addition, coco coir is organic. This coco coir is minimally processed, which leaves the internal structure of the coir intact and retains its organic nature.

SEEDLING TRANSPLANT INSTRUCTIONS:

Carefully remove the plant from the shipping package and place directly into your net pot in your tower. With tower clips, poke a small hole into the bottom of the coco coir casing and place the seedling onto the tower clip, then place the clip & seedling together into your tower.

DO NOT REMOVE THE COCO COIR CASING.

Instructions for Using Dry Coco Coir Disks for Germinating Seeds:

- 1 Soak disks in tap water until they expand which will be at least 5-10 minutes (longer is ok).
- 2 Place seeds in the center divot/hole. If hole is not deep enough, use a Phillips screwdriver to make hole deeper. Then pull coco coir over the seeds. No need to use vermiculite. Water daily.
- 3 Place on heat mat at 80 degrees. Once germinated, remove from heat.
- 4 Once the seedlings are 1-2 inches tall, use half strength nutrients (10 ml A & B/gallon water) two times a week. Don't over fertilize.
- 5 Place in Net Pot or on Tower Clips once seedlings are 2-3 inches tall

SEEDLINGS

True Garden offers over 100 different seedlings for your towers. These varieties include flowers, fruits, vegetables, greens & herbs. True Garden also offers shipping to the 48 contiguous states.

**TRUE PROJECTS IS AN
INITIATIVE THAT HELPS
COMMUNITIES GROW
— HEALTHILY AND
SUSTAINABLY**

Powered by the support of

True Garden, and the technology of Tower Garden, True Projects wants to build communities and gardens that are sustainable, nourishing, and empowering.

Working within our community, True Projects seeks to connect non-profits, neighborhoods, schools, and other organizations with the skills to harness the nutrition of plants.

Nutritional education is lacking in most communities, and it isn't being taught anywhere. Yet we are constantly reminded of the need to eat healthy. Without resources and education, that message fails to deliver results.

The impact in our community is PRICELESS! Our first project was in our own back yard. Just a few miles from the True Garden Farm, we partnered with Sunshine Acres Children's Home to help them establish a 5600 sq. ft. greenhouse. Their farm will produce enough food for them to feed every resident at their facility year round!

OUR PARTNERSHIP WITH RX FORMULATIONS

RxFORMULATIONS

PRESCRIPTIONS FORMULATED JUST YOUR YOU

Rx Formulations tailors prescriptions to the individual patient, physician, and diverse health care practitioner. Many medical conditions can be treated with commercially available medications, while others require a customized formulation. Rx Formulations can alter the strength from what is currently available or eliminate dyes or fillers that don't agree with the patient. Additionally, if some mass-marketed prescriptions have been reformulated or production has discontinued, Rx Formulations can assist you with formulating a product that is no longer available. We have a full line of well-made supplements to fit your needs. No matter what you are looking for we have the perfect combination of supplements made with only the highest quality ingredients.

CHECK OUT OUR E-BOOKS AVAILABLE IN EPUB & PDF!

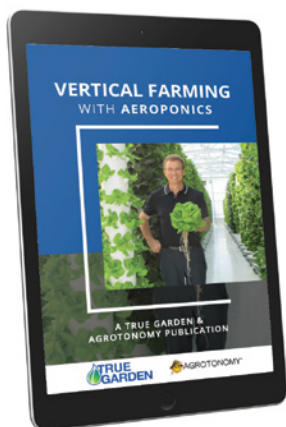

This e-book provides a wealth of advice allowing you to enhance and optimize your crop yield!

We do not address every crop which can be grown on your aeroponic tower. This e-book is just pertinent to those plants for which we feel that our experience can bring an added value to your tower gardening experience.

Your tower came with an instruction manual that gives comprehensive information to grow most crops.

However, through trial and error, we have found different and better ways to handle a large variety of produce options.

WE HAVE SET UP TOWER FARMS INDOORS AND OUTDOORS IN THE USA, EUROPE, THE MIDDLE EAST, AFRICA, AND SOUTHEAST ASIA.

This e-book is the most comprehensive and complete publication ever published about Tower Farms. It is a must have for anyone considering setting up an aeroponic Tower Farm.

This e-book covers it all: rate options, technical specs, shipping, MOQ, reseller information, water & electricity consumption, space allocation, nutrients quality & usage, labor involved, crop yield, system installation, training, irrigation system, greenhouse specifications, export forms, etc.
